

"PLEASE FIX STORAGE"

If your XDS receiver displays this message on the home screen after this weeks firmware upgrade please follow the steps below to clear the alarm:

If prompted press "2" at the home screen or follow steps below...

The front panel keyboard sequence is :

Press the **'SET'** Key ->

'Status' - >

Press the **'Set'** Key ->

'Active Faults' - >

Press the **right arrow** key to **'STORAGE STATUS'**

At the **'STORAGE STATUS'** page Press key **'3'** - **"FIX"**

This will initiate a "fix" that will take approximately 8 minutes to complete.

Q) Why did this error occur and does it matter?

A) The XDS receiver operates very similar to a PC. The receiver must be shut down properly in order to maintain the integrity of the Flash and Hard drive storage devices.

We have added a disk management sub routine to check the integrity of these devices on reboot. If a fault is found the receiver LCD home page will display "PLEASE FIX STORAGE".

*** We urge you to follow the steps above to keep your system storage operating properly.

The proper procedure to shut your XDS receiver down can be found on the XDS FAQ located at <http://engineering.premiereradio.com/>.
